

This core catcher template works well for 10 cm internal diameter PVC tubing, but it is actually based on English units (e.g. inches) because that is what we still use here in the U.S. (unfortunately).

Note that this page is formatted for U.S. Tabloid size (e.g. 11x17 inches) sheets. Make sure when you print this out from Acrobat that you do **not** have the "Fit to page" option selected, else Acrobat will scale the page to fit on your chosen output size.

If you have questions, comments, or suggestions about how to improve this template, write me an e-mail.
